Re: Revised Draft Supplemental Impact Statement for Lease Sale 193

Dear Mr. Kendall:

I would like to express my strong support of oil and gas development in the Chukchi Sea and other areas of Alaska's Outer Continental Shelf (OCS) and to urge the Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE) to finalize the environmental review process and move forward with Lease Sale 193. I appreciate the opportunity to submit a public comment on the revised Draft Supplement Impact Statement, released by BOEMRE on May 20th. Lease Sale 193 has undergone exhaustive environmental review, and the potential environmental impacts have undergone a very lengthy and thorough analysis. Oil and gas development in the Chukchi Sea can and should be done safely, and it is past time for the government to proceed with Lease Sale 193 so that Americans can fully realize the energy and economic benefits increased domestic energy production can bring.

Offshore oil and gas development in Alaska will strengthen our energy security, create jobs in Alaska and across the country, and generate significant government revenue. With a conservatively estimated 27 billion barrels of oil and 132 trillion cubic feet of natural gas, energy production on Alaska's OCS is critical to our country's long-term energy supply. It is estimated that economic activity from the development of the Chukchi and Beaufort Seas would create an annual average of 54,700 jobs nationwide. Government revenue generated from the Chukchi Sea is estimated to be nearly \$50 billion over the next fifty years. The benefits of energy production on Alaska's OCS cannot be overstated; development of our domestic energy resources is an asset to the entire economy.

In order to achieve greater price stability for consumers, America needs more energy – not less. The United States continues to import oil from unstable and adversarial countries despite the vast North American resources available. We are forced to rely on oil imports, which put the United States at greater risk for disruptions in supply and price spikes. Volatile energy prices hinder economic growth and make it extremely difficult to do business. But expanding our domestic production will increase our energy supply and help meet growing demand. For that reason, I strongly support moving forward with Lease Sale 193.

Upon conclusion of this public comment period, I respectfully request that the lease-holders be allowed to move forward with planned exploration and production. I appreciate BOEMRE's attention to this important matter and look forward to safe and responsible energy production in the Chukchi Sea.

Sincerely,

Prudential
